

# DXP DOCUMENTER

## FOR AUTOMATED DOCUMENTATION

Streamline validation and template governance through Automated template documentation

Automated  
Documentation

Governance

Streamline rollout  
Optimization

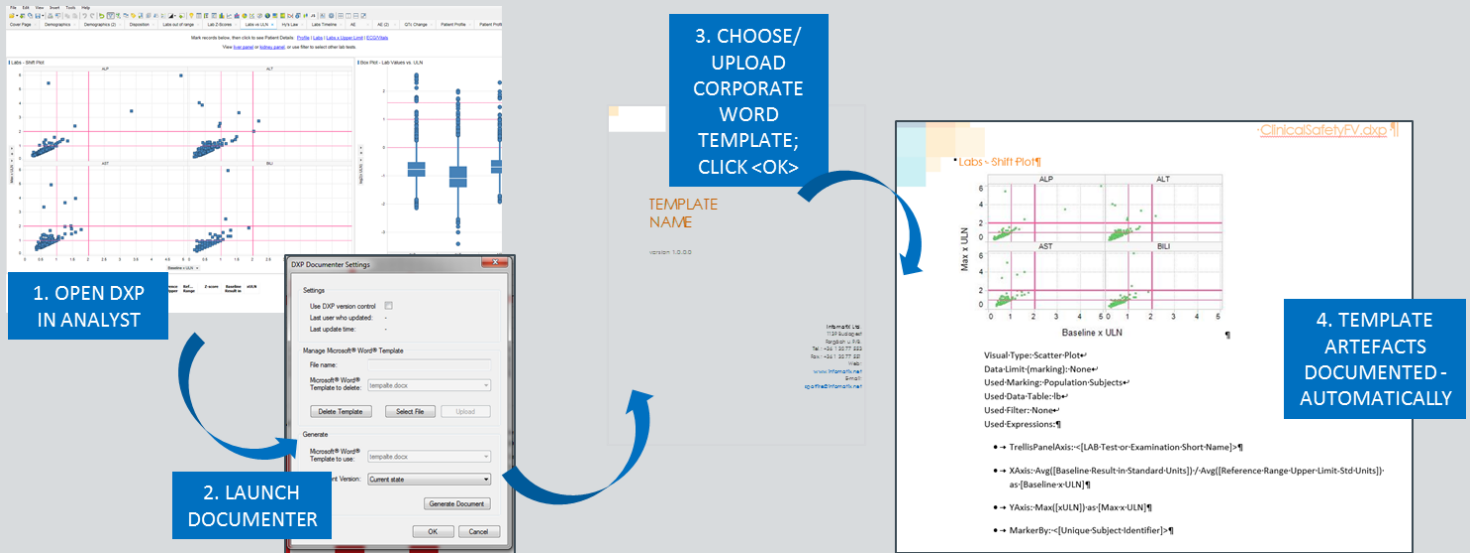

### Automated Documentation

DXP Documenter provides automated documentation functionality to streamline analytic report development and validation and improve governance and quality assurance.

- Compress report deployment cycles through automatic DXP documentation, saving several days of business analyst work
- Improve performance by pinpointing unused data tables, columns and calculations in your Spotfire templates

### Challenges

- Reduce the risk of manual errors
- Avoid replication of DXP files in the library
- Monitor versioning and overcome major overhead

## DXP Attributes Documented:

- Unused data tables, and columns
- Data tables, including source information (for e.g. data functions)
- Scripts (Iron Python and Java Scripts)
- Calculated columns (and expressions)
- Visualization screenshots
- Visualization details
- Document Properties
- HTML Text Area contents, and actions
- Custom expressions
- Report Version & attributes
- Datasets used on each page
- Data table used by visualization
- Marking & active filter information

## Business Values

Highlight, and document unused elements of the Spotfire reports

One-click documentation from reports

—> 90% time on report documentation with increased quality

Support automated E2E documentation of DXPs from library as well as local reports

Embed screenshots into the document

—> More descriptive documentation

Enforce following company documentation standards
