

IX VERSION CONTROL

GOVERN SPOTFIRE REPORT AUTHORIZING AND RELEASE WITHIN YOUR STANDARD ENTERPRISE VCS

Collaboration

Teamwork

Governance

DXP Version Control

Transforming TIBCO Spotfire Platform into Enterprise-managed, version controlled environment, increasing governance around authoring, enabling teamwork and unleashing collaboration possibilities.

The tool seamlessly integrates into Spotfire Professional / Desktop Player and compatible with industry leader versioning and revision control systems, such as Microsoft Team Foundation Server, GIT or SVN enabling common version control functionality such as version tracking, comparison, history, change log generation and ability to restore previous versions.

Challenges

Business Risk: audit inaccuracies due to blurred rollout procedures

Tracking & coordinating changes by Report Template Authors

Conflicts in collaborative report development

Extensive manual verification & time cost in report validation

Opportunities

MITIGATE BUSINESS RISK with governed template rollout

Enable streamlined **collaborative** report **development**

Radically **reduce** report validation and development **time**

Further **monetize & integrate core IT investments**

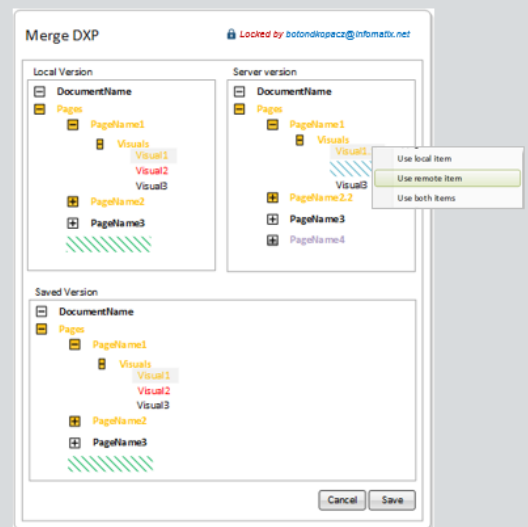

Features:

- Integration with TIBCO Spotfire Desktop
- Automatic Check-out, Check-in of DXPs
 - Highlight check-out users in Analyst Open DXPs in read-only mode from Professional Player
 - Enable parallel report development, collaboration on same DXP
- Detailed report comparison, history and change tracking of DXPs
- Built-in version control of DXP files (change log, history, etc.) integrated into TIBCO Spotfire Desktop/Analyst

The component enables seamless and transparent integration of TIBCO Spotfire Analyst / Desktop into enterprise versioning and revision control systems (MS TFS, SVN, GIT, etc.) to enable real collaboration, and parallel development possibilities, and turning the platform into governed environment.

Business Value

- Increase governance, validation and confidence around DXP releases to production
- Turn TIBCO Spotfire environment into collaborative workspace which allows parallel development of same report and merge of changes
- Enable multiple authors to work on DXP files

INTEGRATED RESOURCES

Fully leverage strategic software through further integration and seamless operation

Replicate and scale integrated use across service lines for full monetization of assets

REDUCED AUDIT RISK

Ensure validated reports are **released to production with full control**

Eliminate risk of non-compliant reports used in regular audit

OPTIMIZE INFRASTRUCTURE

Standard environment for publishing analytical reports **simplifies & reduces IT overhead**

Increase **governance and reduce IT risk**

INCREASED EFFICIENCY

Closed loop between report authors streamlines development life cycle & improves quality

Automation **saves hundreds of auditor hours from technical documentation**
